

★ MARK XXXIX-OR • CUSTOMER INSTALLATION GUIDE

J.A.R.V.I.S AI ASSISTANT

The Autonomous Cross-Platform Voice & Vision Desktop AI Companion.

Teacher's Step-by-Step Setup & Buyer's Complete Operating Manual

Real-Time Voice Streaming

Gemini 2.5 Live native bidirectional speech

Screen & Camera Vision

Real-time desktop OCR, analysis & targeting

Autonomous Web Agent

Playwright-powered navigation & research

Complete Windows Control

Launch apps, adjust volume, clean desktop & files

A Personal Note From Your Instructor

"Welcome to JARVIS! Even if you have never written a single line of code or opened a terminal, do not worry. This manual is written like a patient, friendly classroom tutorial. Follow each step in order, and JARVIS will be talking with you and controlling your PC in under 10 minutes!"

Target OS: **Windows 10 / 11 (64-bit)**

Package Edition: **Mark XXXIX-OR Customer Release**

Prepared for: **Authorized Buyer**
Estimated Setup Time: **8 to 12 Minutes**

1 Welcome & Unboxing Your JARVIS Package

Congratulations on acquiring **JARVIS MARK XXXIX-OR**! Inspired by Tony Stark's legendary AI, this assistant lives directly on your Windows PC. It listens to your voice via microphone, responds in real-time speech, sees your screen, and autonomously carries out multi-step tasks across your apps and the web.

1

Extract ZIP

To normal folder

2

Install Python

Check "Add to PATH"

3

Get Free Keys

Gemini + OpenRouter

4

Run Batch File

run_jarvis.bat

5

Start Talking!

Full voice & HUD

What is Inside Your ZIP File?

JARVIS-MAIN/ | |— `run_jarvis.bat` — ● **PRIMARY LAUNCHER**: Double-click this to run JARVIS with 1 click! |— `launch_jarvis_silent.vbs` — 👤 **STEALTH LAUNCHER**: Runs JARVIS without any black CMD window. |— `enable_autostart.bat` — 🚀 **AUTO-START**: Starts JARVIS automatically when Windows boots. |— `disable_autostart.bat` — 🛑 **STOP AUTO-START**: Reverts Windows back to standard boot. |— `setup.py` — 📦 **AUTO-INSTALLER**: Automatically installs Python packages & Playwright. |— `requirements.txt` — 📄 **DEPENDENCY LIST**: All required modules (PyQt6, sounddevice, etc.). |— `main.py` — 🎤 **CORE ENGINE**: Orchestrates live audio, vision, and tool calls. |— `ui.py` — 🖥️ **HUD INTERFACE**: Cyberpunk sci-fi holographic user interface. | |— `config/` | |— `api_keys.json` — 🔑 **YOUR KEYS**: Stores your Gemini & OpenRouter keys. | |— `api_keys.example.json` — 📄 Example template file. | |— `actions/`, `agent/`, `memory/` — ⚙️ Deep automation tools, planners, and long-term memory.

👨‍🏫 Teacher's Rule #1: Always Extract the ZIP First!

Never run files directly from inside the Windows "compressed folder" preview!

Right-click your downloaded ZIP file → choose **"Extract All..."** → select a standard directory (e.g. C:\JARVIS or Desktop\JARVIS) → click **Extract**. Run all files from that extracted folder.

2 Hardware & System Checklist

Component	Requirement	Teacher's Note
Operating System	Windows 10 or Windows 11 (64-bit)	Fully supported out of the box.
Microphone	Any USB mic, headset, or laptop mic	Required for voice conversation.
Audio Output	Speakers or Headphones	Used to hear JARVIS's voice output.
RAM Memory	4 GB minimum (8 GB recommended)	Lightweight & efficient cloud-powered AI.
Internet	Active Broadband / Wi-Fi	Required for live Gemini audio streaming.
Cost / Subscriptions	100% FREE API Tier Available	No paid subscription is strictly required!

3 What to Download First (Teacher's Preparation)

JARVIS only needs **ONE** external piece of software installed on your PC: **Python**. Follow this section carefully to ensure smooth installation.

STEP 3.1

Download & Install Python 3.11 or 3.12 (64-bit)

1. Go to the official Python download page: <https://www.python.org/downloads/>
2. Click the yellow "**Download Python 3.12**" button.
3. Double-click the downloaded `python-3.12.x-amd64.exe` installer.
4. **CRITICAL CHECKBOX:** At the bottom of the installer window, check the box that says:
☒ **Add python.exe to PATH**
5. Click "**Install Now**" and wait about 1 minute for it to complete.

⚠ THE #1 MISTAKE 90% OF NEW USERS MAKE

If you forget to check "**Add python.exe to PATH**", Windows will say: "*python' is not recognized as an internal or external command*". If this happens, simply re-run the Python installer, choose **Modify**, and check the PATH box!

STEP 3.2

Verify Python in Windows Command Prompt

Let's verify Python in 5 seconds:

- ✓ Press **Windows Key** + **R**, type `cmd`, and press **Enter**.
- ✓ In the black window, type: `python --version` and press Enter.
- ✓ You will see: `Python 3.12.x` (or 3.11.x). Success! Your computer is ready.

STEP 3.3

Allow Windows Microphone Permissions

To ensure JARVIS can hear your voice clearly:

1. Open Windows **Settings** (**Win** + **I**).
2. Navigate to **Privacy & Security** → **Microphone**.
3. Verify "**Microphone access**" is toggled **ON**.
4. Verify "**Let desktop apps access your microphone**" is toggled **ON**.

4 Getting Your Free AI API Keys (Step-by-Step)

Think of API keys like your personal access passes to the cloud AI models. JARVIS connects to two brains: **Google Gemini Live** (for instant voice conversation & vision) and **OpenRouter** (for autonomous computer control). Both offer **100% Free Tiers** with zero cost!

KEY #1 REQUIRED

Google Gemini API Key (Voice & Vision Engine)

This powers JARVIS's real-time voice conversations and visual screen recognition.

How to get it in 2 minutes:

1. Visit Google AI Studio: <https://aistudio.google.com/>
2. Sign in with your standard Google / Gmail account.
3. Click the blue **"Get API key"** button in the sidebar or top banner.
4. Click **"Create API key"** → choose "Create API key in new project".
5. Copy your key (starts with AIzaSy. . .). Save it in a temporary Notepad file.

💡 Why Gemini 2.5 Live?

JARVIS connects directly to Google's native audio streaming model (gemini-2.5-flash-native-audio-preview). Because it streams raw audio bidirectionally, response latency is near-instantaneous!

KEY #2 REQUIRED

OpenRouter API Key (Autonomous Agent & Tools)

This powers multi-step planning, code generation, error recovery, and web scraping.

How to get it in 2 minutes:

1. Visit OpenRouter: <https://openrouter.ai/>
2. Sign in using Google or email.
3. Click your profile icon at top right → select **"Keys"** (or visit `openrouter.ai/keys`).
4. Click **"Create Key"**, name it Jarvis, and click **Create**.
5. Copy your key immediately (starts with `sk-or-v1-...`).

💡 Completely Free Tier Available

OpenRouter provides free access to high-performance models (Llama 3, Mistral, DeepSeek). You do not need to enter a credit card to use the free models.

5 Setting Up & Launching JARVIS

Now comes the best part! JARVIS is built with an automatic 1-click startup process.

METHOD 1 (RECOMMENDED)

The 1-Click Interactive Launcher

1. Open your extracted **JARVIS-MAIN** folder.
2. Double-click **run_jarvis.bat**.
3. JARVIS will prepare the environment. The very first time it opens, the **Holographic Setup Dialog** will appear on screen!
4. Paste your **Gemini API Key** in the first field.
5. Paste your **OpenRouter API Key** in the second field.
6. Select **Windows** as your operating system.
7. Click the glowing button: **"INITIALISE JARVIS"**.

Teacher's Note: Automatic Setup!

JARVIS will automatically save your keys into `config/api_keys.json` and switch immediately to LISTENING mode. The cyan arc reactor will spin and activate!

METHOD 2

Editing api_keys.json Directly (Alternative)

If you prefer configuring your keys before launching:

1. Open the **config** subfolder inside your JARVIS folder.
2. Right-click **api_keys.json** → **Open with** → **Notepad**.
3. Paste your keys between the quotation marks:

```
{ "gemini_api_key": "AlzaSyD_YOUR_ACTUAL_GEMINI_KEY_HERE", "openrouter_api_key": "sk-or-v1-YOUR_ACTUAL_OPENROUTER_KEY_HERE", "os_system": "windows" }
```

Save the file (**Ctrl** + **S**) and double-click **run_jarvis.bat**.

CONVENIENCE LAUNCHERS

Silent Stealth Mode & Windows Boot Auto-Start

Launcher File	What It Does	How to Use
launch_jarvis_silent.vbs	Launches JARVIS silently in the background with NO black CMD window on your taskbar. Only the pure sci-fi HUD appears!	Double-click anytime for everyday clean desktop use.
enable_autostart.bat	Registers JARVIS into Windows Startup. Every time you turn on your PC, JARVIS boots up silently in the background.	Double-click once. A success confirmation dialog appears.
disable_autostart.bat	Removes JARVIS from Windows Startup so your PC boots normally.	Double-click once whenever you wish to remove auto-boot.

6 Anatomy of the HUD & Interaction Modes

JARVIS features an Iron Man Mark XXXIX cyber holographic HUD interface. Here is how every part of your screen works:

The 3 Ways to Interact

Interaction Mode	How to Use	Arc Reactor Indicator
 Voice Mode	Speak naturally into your microphone at any time. JARVIS detects your voice, processes the intent, and replies in real time.	● LISTENING (Cyan glow) → ● SPEAKING (Pulse)
 Text Command Bar	Type any instruction or question in the bottom-right COMMAND INPUT bar and press Enter .	Allows silent operation without speaking aloud.
 Drag & Drop Tray	Drag any PDF, image, spreadsheet, or code file directly onto the center dropzone tray.	Attaches instantly. Say: "Summarize this document" or "Explain this chart".

Essential Keyboard Shortcuts

Shortcut	Function	Why Use It?
F4	Toggle Microphone Mute	Instantly mutes the mic for privacy when answering a call or entering meetings.
F11	Toggle Fullscreen Hologram	Expands the futuristic HUD to fill your entire monitor. Press again to exit.
Enter	Submit Command Bar Text	Sends typed commands to JARVIS's core agent.
Esc	Close Overlays / Fullscreen	Exits popup windows or full-screen view.

6B Masterclass: JARVIS's 17 Built-In Superpowers

Unlike basic chatbots that only output text, JARVIS is wired directly into your operating system with 17 autonomous capability modules:

Real-World Command Examples (Say or Type These!)

Windows & Hardware

- "Open Google Chrome"
- "Set volume to 40%"
- "Mute the computer"
- "Take a screenshot of my screen"
- "Clean up my desktop clutter"

Web & Automation

- "Play synthwave on YouTube"
- "What is the weather in London?"
- "Search the web for top tech news"
- "Find flights from Tokyo to Paris"
- "Open browser and research AI agents"

Screen Vision

- "Look at my screen: what is this error?"
- "Read the text on my screen"
- "Explain this graph on my monitor"
- "Click the submit button on this page"

Memory & Coding

- "Remember that my favorite language is Python"
- "Remind me in 20 minutes to stretch"
- "What do you remember about my projects?"
- "Write a Python script to sort my downloads"

PLAYWRIGHT ENGINE

Autonomous Browser Navigation

JARVIS can launch a headless or visible Chromium browser, click buttons, fill out web forms, read web articles, summarize long pages, and extract data autonomously without requiring your mouse.

MULTIMODAL PARSER

Drag-and-Drop Document Tray

Drop any PDF, Excel spreadsheet (.xlsx), Word document (.docx), PowerPoint (.pptx), or source code file onto the HUD. JARVIS extracts the text, table data, or code logic and explains it in plain speech.

VISION INTELLIGENCE

Screen Vision & Desktop OCR

Whenever you ask "What's on my screen?" or "Help me fix this error", JARVIS takes a high-speed lossless screen capture, runs multimodal vision analysis, reads error dialogs, and suggests fixes.

LONG-TERM MEMORY

Contextual Memory Engine

JARVIS saves personal facts, preferences, habits, and active project notes inside memory/long_term.json. You can say "Remember I am traveling next Tuesday" and JARVIS recalls it in future sessions!

7 Teacher's Troubleshooting Clinic (Instant Fixes)

If you run into any hitch, do not panic! Here is the teacher's instant diagnostic guide covering every common scenario:

ISSUE #1

"Python is not recognized as an internal or external command"

Root Cause: Python was installed without the "Add python.exe to PATH" checkbox enabled.

Teacher's 60-Second Fix:

1. Open your Downloads folder and run the Python installer again.
2. Select **Modify** → click Next → on the Advanced Options screen, check **"Add Python to environment variables"**.
3. Click **Install**. Close any open Command Prompts and re-run `run_jarvis.bat`.

ISSUE #2

"Microphone error / PyAudio stream error / JARVIS can't hear me"

Root Cause: Microphone is unplugged, muted, or blocked by Windows privacy settings.

Teacher's Fix:

- Check Windows Settings → Privacy & Security → Microphone → verify access is **ON**.
- Right-click the speaker icon on Windows taskbar → **Sound settings** → Verify your preferred microphone is selected as the **Default Input Device** and input volume is > 70%.
- Press **F4** in the JARVIS HUD to make sure you didn't accidentally mute it!

ISSUE #3

"Invalid API Key / Error 400 / 429 Quota Exceeded"

Root Cause: Typo in API key, extra trailing spaces, or hitting the free tier per-minute limit.

Teacher's Fix:

- Open `config/api_keys.json` with Notepad. Verify your key has quotation marks around it with no extra spaces.
- If you see Error 429, you briefly exceeded Google's per-minute free request limit. Wait 30 seconds and JARVIS will automatically reconnect.

ISSUE #4

"The black CMD window closes immediately upon clicking run_jarvis.bat"

Root Cause: Running directly from inside the unextracted ZIP file, or Python missing.

Teacher's Diagnostic Trick:

1. Ensure you extracted the ZIP completely to a standard folder (e.g. `C:\JARVIS`).
2. Open Command Prompt (**Win** + **R** → `cmd`).
3. Drag and drop `run_jarvis.bat` into the CMD window and hit **Enter**. It will stay open and display the exact missing package or error.

ISSUE #5

"Windows Protected Your PC / SmartScreen Pop-Up"

Root Cause: Windows Defender flags downloaded `.bat` or `.vbs` files by default.

Teacher's Fix: Click **"More info"** → click **"Run anyway"**. This is standard behavior for custom Python scripts and is completely safe.

8 Quick Reference Cheat Sheet & Support

Keep this single-page reference handy at your desk:

Daily Launch Options

Standard Launch Double-click `run_jarvis.bat`

Silent Stealth Double-click
`launch_jarvis_silent.vbs`

Boot Auto-Start Run `enable_autostart.bat`

Disable Auto-Start Run `disable_autostart.bat`

Essential Hotkeys

F4 Mute / Unmute Microphone

F11 Toggle Hologram Fullscreen

Enter Submit Command Bar Query

Esc Exit Fullscreen Mode

5-Point Setup Recap Checklist

- ✓ **Extracted the ZIP file** to a real folder on your drive (e.g. `C:\JARVIS`).
- ✓ **Installed Python 3.11 or 3.12** and ticked "**Add python.exe to PATH**".
- ✓ **Got your Free Google Gemini API Key** from `aistudio.google.com`.
- ✓ **Got your Free OpenRouter API Key** from `openrouter.ai/keys`.
- ✓ **Double-clicked `run_jarvis.bat`**, entered keys, and watched JARVIS come alive!

Thank You For Your Support!

We built MARK XXXIX-OR with love and dedication to bring the real-world Jarvis experience right to your desk. If you find JARVIS valuable in your daily life, please leave a positive review or rating where you purchased it! Have questions or ideas for new actions? Reach out through your buyer portal or customer support link.
